

Q1) histogram

Q2)

$$S.D = 100$$

$$N = 25$$

Date / /

$$\text{Mean} = 520$$

Construct 80% C.I.
about the mean

Saathi

Ans

$$\bar{x} = 520$$

$$S.D = 100$$

$$\alpha = 0.2$$

- > Population S.D is not given \therefore Z test not applicable
- > So use t test.

$$\bar{x} \pm t_{\alpha/2} \frac{s}{\sqrt{n}}$$

$$\begin{aligned} \text{d.o.f} &= 25 - 1 \\ &= 24 \end{aligned}$$

$$\begin{aligned} &\left[\begin{aligned} &t_{\frac{0.2}{2}} \text{ at } 24 \text{ d.o.f} \\ &= 1.32 \\ &\text{table value} \end{aligned} \right] \end{aligned}$$

$$\text{lower fence} = 520 - 1.32 \times \frac{8}{\sqrt{25}} = \underline{\underline{517.888}}$$

$$\text{higher fence} = 520 + 1.32 \times \frac{8}{\sqrt{25}} = 522.112$$

80%
Confidence Interval

Q3)

% of owning a car $\leq 60\%$ Date $n = 250$ residents

Saathi

170 residents responded 'yes'.

a) null hypothesis $H_0: p_0 \leq 60\%$ Alternate Hypothesis $H_1: p_0 \neq 60\%$ b) population proportion $= \frac{60\%}{100\%} = p_0$ $n = 250$ $\bar{n} = 170$ Sample proportion $\hat{p} = \frac{\bar{n}}{n} = \frac{170}{250} = 0.68$ Remaining part q_0 , $p_0 = 1 - p_0 = 1 - 0.68 = 0.32$
 $\alpha = 0.1$ Z value for $\alpha = 0.1 = 1.645$

$$\begin{aligned}
 \text{Z test with proportion} &= \frac{\hat{p} - p_0}{\sqrt{\frac{p_0 q_0}{n}}} = \frac{0.68 - 0.6}{\sqrt{\frac{0.6 \times 0.4}{250}}} \\
 &= \frac{0.08}{\sqrt{0.00096}} \\
 &= 2.588
 \end{aligned}$$

Calculated Z value greater than 1.645

So Reject null hypothesis

Page No.

Q4) What is the value of 99 percent?

Date 2, 2, 3, 4, 5, 5, 5, 6, 7, 8, 8, 8, 8, 8 saat

9, 9, 10, 11, 11, 12

$$99^{\text{th}} \text{ percentile} = \frac{99}{100} (20 + 1)$$

$\Rightarrow 20^{\text{th}} \text{ Index} = 12$

99th percentile = 12028 = N

~~051-30~~

Que 5.)

Mean, Median, Mode - Left skew Vs Right skew

Left Skewed

$\text{mode} > \text{median} > \text{mean}$

Left Skew

Right Skewed data.

$\text{mean} > \text{median} > \text{mode}$

Right skewed.
